PROFESSIONAL SUMMARY

Electronics & Communication Engineering graduate (May 2026) and AI/ML practitioner offering freelance and remote, part-time support in machine learning model development and data annotation/labeling for AI training pipelines. Hands-on experience building end-to-end ML workflows — data preprocessing, feature engineering, model training, and evaluation — demonstrated through a cybersecurity AI project, an assistive-technology edge AI project, and a professional AI internship. Comfortable working independently in remote settings with strong attention to detail. Available for flexible, async, part-time engagements (1–2 hrs/day).

TECHNICAL SKILLS

AI / ML:	Machine Learning · Deep Learning · Generative AI · LLMs · NLP · Computer Vision · Anomaly Detection · Model Training & Evaluation · Feature Engineering · Data Preprocessing
Data Annotation:	Text & Image Labeling · Classification Tasks · Quality/Accuracy Review · Inter-Annotator Agreement · Dataset Preparation
Programming:	Python · Java · C
Frameworks:	OpenCV · TTS · TensorFlow · scikit-learn · Raspberry Pi · MATLAB · LABVIEW · XILINX
Domains:	Cybersecurity · IoT · Embedded Systems · Assistive Technology · Signal Processing · Edge AI
Remote Tools:	Git/GitHub · Streamlit · Google Workspace .

EXPERIENCE

AI Engineering Intern

Jun 2025 – Jul 2025

Artificial Intelligence Domain | Remote

- Designed and evaluated AI/ML models in Python, independently managing data preprocessing, feature engineering, classification, and model training pipelines in a remote work setting.
- Applied anomaly detection and supervised learning algorithms to real-world problem statements, improving detection accuracy while communicating progress asynchronously with mentors.
- Gained full end-to-end AI development workflow experience — from data ingestion and model training to evaluation and deployment.

PROJECTS

AI-Enhanced Side Channel Attack Detection & Mitigation

B.Tech Final Year Project

- Co-developed a Python-based ML model to detect hardware-level side channel attacks by classifying electromagnetic and power signal patterns, achieving real-time anomaly flagging (80.75% test accuracy, 1.1–1.4ms inference).
- Applied supervised classification algorithms on hardware signal datasets, integrating cybersecurity domain knowledge with signal processing techniques.
- Built a complete AI pipeline: data collection → feature extraction → model training → evaluation → mitigation strategy. Code and documentation available on GitHub.

Raspberry Pi Based Text Reader for the Blind

Mini Project

- Co-developed an edge AI assistive device using Raspberry Pi, Python, OpenCV, and a TTS engine to perform real-time OCR and convert printed text to speech for visually impaired users.
- Integrated a computer vision pipeline with speech synthesis, demonstrating practical AI deployment on constrained edge hardware. Code and documentation available on GitHub.

EDUCATION

B.Tech–Electronics and Communication Engineering

Aug 2022 – May 2026

APJ Abdul Kalam Technological University, Kerala, India | CGPA: 6.70 / 10

CERTIFICATIONS & TRAINING

- NPTEL– Programming in Java (Jan–Apr 2025)
- Workshop: Analysis & AI – Nyeste Ventures Technologies Pvt. Ltd. (Sep 2023)
- Workshop: Cybersecurity Fundamentals – ICI, Govt. College of Engineering Kannur (Nov 2022)
- IEEE Technical Event – VORTEX (AP-S & MTT-S, Oct 2024)
